Evans S;

Wang Y,

```
The invention relates to a human type-5 recombinant adenovirus vector for achieving cardiac-restricted transcription of a gene of interest. The vector comprises inverted terminal repeat (ITR) sequences from human adeno-associated virus (AAV) type 2 (AAAI0409) and a cardiac tissue-specific promoter. In particular, the promoter is that of the cardiomycoyte-restricted cardiac ankyrin repeat protein (CARP) gene. The adenovirus vector is used for targetted gene therapy for heart disease and for evaluating gene function. Cardiac restricted transcription of a transgene in both neonatal and mature cardiac tissues can be achieved to treat inherited and acquired heart diseases. The vector is suitable for tissue-specific use in vivo and in vitro and provides cardiac restricted transcription. The present sequence
                                                                                                                                                                                                                                                                                                                                                                        represents the murine cardiac ankyrin repeat protein (CARP) promoter
                                                                                                  Human type-5 recombinant adenovirus vector used for targeted gene therapy for heart disease and evaluating gene function contains a tissue-restricted promoter and inverted terminal repeat sequences
                                                                                                                                                               Claim 8; Page 29-30; 33pp; English

The invention relates to a polynucleotide (I) comprising a fragment of a sequence upstream of the coding part of the gene for the Cardiac Ankyrin Repeat Protein (CARP). (I) is capable of inducing a specific expression in vivo of a gene operably linked to (I), in cardiac cells. (I) or a vector (IIb) comprising (I) is useful for the manufacture of a medicament in the dragment of cardiac insufficiency, cardiac hypertrophy and hypoxia, and for preventing rejection during cardiac transplant. An expression cassette under the control of (I) is useful for encoding a correcting muscle contractility, cardiac hypertrophy, cardiac or RNA which is capable of activating the growth of cardiac correcting muscle contractility, cardiac hypertrophy, cardiac correcting muscle contractility, cardiac hypertrophy, cardiac for expressing a gene of therapeutic interest in vivo, by isolating (IIb) and introducing (IIb) in the cardiac tissue, under conditions so that the gene of interest is expressed. (I) the vectors and the compositions are useful in clinical, expressing cardiac pathologies. (I) is also useful for screening cransgenic animals which constitute models for studying certain cardiac pathologies. (I) is also useful for screening molecules for their activity on the regulatory sequences of the gene concoding the CARP protein. The present sequence represents the DARP protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1897
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1955

                                                                                                                                                                            2309
                                                                                                                              The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA00010-AA01310) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or polynucleotides and polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human, cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Note: The sequence data for this patent did not form part of the printed

The patent discloses novel target genes abnormally expressed in heart tissues and their corresponding proteins. The invention also relates to methods for assessing the expression level of these genes. The method is used for testing the predisposition of mammals and preferably humans for a heart disease or for an acute state of such a disease. It is also useful to treat diseases of the heart such as congestive heart failure, dilative cardiomyopathy, hypertrophic cardiomyopathy, isohaemic cardiomyopathy, property disease, rhythm and conduction disorders, syncope and sudden dath, coronary heart disease, systemic arterial hypertension, pulmonary hypertension, pulmonary hypertension, pulmonary heart disease, congenital heart disease, pericardial disease and conduction non-human mammal comprising the sequences of the invention are useful for the development for medicaments for the treatments of the control of the invention are useful for the development for medicaments for the treatments of the control of the control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2164

Gastric Antrum Mucosal Protein 18, useful for preparing a composition for healing of the injured gastrointestinal tract
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           by specific antisers, suggesting that AMP-18, or its products, is a growth factor. AMP-18 may play a critical role in the repair of the stomach epithelium following damage by agents such as alcohol, non-steroidal antiinflammatory drugs, or pathogens, particularly Helicobacter pylori, a causative agent of gastric ulcers and possibly cancers. AMP-18 protein, or an active peptide of AMP-18, is used in a claimed method of stimulating the growth of epithelial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is that of a gene encoding a novel member of the murine gastrokine group, designated antrum mucosal protein 18 (AMP-18). AMP-18 was initially detected in mammalian gastric antrum mucosa by a differential screen of cDNA libraries obtained from different regions of the pig stomach. A cDNA was also isolated from a mouse library (see ABZ24660). Genomic AMP-18 DNA sequences were subsequently cloned as a prelude to the analysis of gene regulatory elements. AMP-18 protein is expressed at high levels only in the gastric antrum, and is synthesised in the lumenal surface mucosal cells. Partially purified AMP-18s from mouse and pig antrum tissue are mitogenic to confluent stomach and kidney epithelial cells in culture. This effect is inhibited

                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a protein inhibitor which comprises homologous cellular growth stimulating proteins designated gastrokines. The invention also provides gastric antrum mucosal proteins designated AMP-18 which belongs to the novel group of gastrokines and nucleic acid molecules encoding such proteins. Pharmaceutical composition comprising growth stimulating peptide derived from a gastrokine protein is useful for treating gastro-intestinal disorder or diseases associated with overgrowth of gastric epithelia e.g. ulcer. The invention is useful therapy. The present sequence is mouse pre-AMP-18 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         451 Trcacaddedcarartcagararccigcarcradcrarracarracarracarracaraac

The invention describes an isolated nucleic acid molecule encoding gene product that, when knocked out, results in a high growth (hg) phenotype. For example a nucleic acid disrupting the Socs2 gene is useful for producing an animal characterised by a hg phenotype, by inhibiting expression of Socs2 (supressor of cytokine siganling 2) gene. The nucleic acids of the invention are useful for regulating body size in mammals. gene. The nucleic acids of the invention are useful for regulating body size in mammals. gene. The nucleic acids of the invention are useful for regulating body size in mammals. This sequence represents the mouse high growth region.

Note: This sequence did not form part of the printed specification but was obtained in electronic format directly from the US patent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Neuron-specific transcription; promoter; mouse; Presenilin-1 gene; transgenic; laboratory model; Alzheimer's disease; ss.

                                                                                                                                                                                                                The invention relates to novel drug compositions for the treatment and prevention of disorders of food intake and body weight containing as the active component histamine receptor H3 protein, or DNA encoding it, or an agonist or antagonist to it. A composition of the invention has anorectic activity. Compositions containing the histamine receptor H3 protein may be used in the treatment and prevention of disorders of body weight and food intake. The present sequence represents the mouse histamine receptor

The method is useful in drug development, particularly for conducting toxicity studies and analysis before a new drug or compound is approved for human consumption or use. The method is also useful in determining toxicological responses to a new drug. This polynucleotide sequence represents a phase-1 rat CT gene of the invention.

For example a nucleic acid disrupting the Socs2 gene is useful for producing an animal characterised by a hg phenotype, by inhibiting expression of Socs2 (supressor of cytokine siganling 2) gene. The nucleic acids of the invention are useful for regulating body size in mammals. gene. The nucleic acids of the invention are useful for regulating body size in mammals. Grane the nucleic acids of the invention of represents the mouse high growth region.

Note: This sequence did not form part of the printed specification but was obtained in electronic format directly from the US patent office at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention describes an isolated nucleic acid molecule encoding

The specification describes a non-human transgenic mammal comprising a genome containing a single copy of a wild-type WFS1 gene and a modified WFS1 allele containing a mutation that disrupts the function of WFS1 allele containing a mutation that disrupts the function of wolframin, or its transgenic progeny. Wolframin is a predicted transmembrane protein expressed in many tissues including pancreas and brain. The transgenic nonhuman animals are useful as models for depression, particularly as models for depression in humans. The animals exhibit chronic stress-induced neurochemical and behavioural changes associated with depression. The transgenic animals are also useful for screening or identifying antidepressant agents, drugs or genes that may be employed to ameliorate or treat depression. The animals are also

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                invention describes nucleic acid sequences isolated from rat. The sequences of the invention comprise 70 viral infection (VI) genes and 8 tumour suppressor (TS) genes. Propagating cell cultures in the absence of the serum protein (SP) allows selective elimination of cells persistently infected with a virus from the cell culture. Inhibitors of the SP can be used for reducing or inhibiting a viral infection. Inhibitors of the TS gene products can be used to suppress a malignant phenotype (MP). The methods and inhibitors can be used with viruses such as HIV, influenza, hepatitis virus or animal retroviruses such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             10458 GACAGTAGTAAAATTACAGTTATGCAGTAGCAATGAAAATAATTTTATGGTTGGCGGGTGAC

Computer Characters Mann. Genome. 12, 673-677 (2001)

Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)

RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)

Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001) cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.

The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the Not! site and the oligo-dT track served to identify it as a clone from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 (bases 1 to 478)

Genome. 12, 673-677 (2001)

Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)

RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)

Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001) cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Email: genome-res@gsc.riken.go.jp,

library is a subtracted library derived from the UI-R-BJ0
UI-R-AB1, UI-R-AC1, UI-R-AD1, UI-R-AB1, UI-R-AB1, and
UI-R-AG1 libraries. These libraries represent tissues from
rat atrium at 16.5 dpc, ventricle at 16.5 dpc, AV canal
at 16.5 dpc, atrium at 15 dpc, ventricle at 13 dpc. AV
canal at 15 dpc, and ventricle at 13 dpc. The tag is a
string of 5-6 nucleotides present between the Not I site
and the oligo-dT track. The library was constructed as
described by Bonaldo, Lennon and Soares, Genome Research
6: 791-806, 1996.
normalized AV canal at 15 dpc library cDNA Library Preparation:
M.B. Scares Lab Clone distribution: clones will be available
through Research Genetics (www.resgen.com) The following repetitive
elements were found in this cDNA sequence: 1-44,
PoLY A#Simple repeat
Seq primer: M13 Forward
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AW251306

The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Bonaldo,M.F., Lennon,G. and Soares,M.B.
Normalization and subtraction: two approaches to facilitate gene
            present between the Not I site and the oligo-dT track. The library was constructed as described by Bonaldo, Lennon and Soares, Genome Research 6: 791-806, 1996. Tissue provided by Jim Lin, Department of Biology, University of Iowa." 17 there

/ library is a subtracted library/derived from the UI-R-BJO |
/ UI-R-BJI, UI-R-ABI, UI-R-BJO |
/ UI-R-BJI ilbraries These libraries represent tissues from rat atrium at 16.5 dpc, ventricle at 16.5 dpc, AV canal at 15.5 dpc, atrium at 15 dpc, ventricle at 16.5 dpc, AV canal at 15.5 dpc, and ventricle at 13 dpc. The tag is a string of 5-6 nucleotides present between the Not I site and the oligo-dT track. The library was constructed as as and the oligo-dT track. The library was constructed as as a constructed a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1058

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Genome Research
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence contained an oligo-dT track that was present in the oligomorlectide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the mormalized ventricle at 13 dpc library obNA hibrary Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com)

electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors a purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

The DNA was hydrodynamically sheared by repeated passage through a 0.05 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel

BCORI; Site_2: BCORI; Female C57BL/6J mouse kidney and/or
Brain genomic DNA was isolated and partially digested
with a combination of EcoRI and EcoRI Methylase. Size
Belected DNA was cloned into the pBACe3.6 vector at the
BCORI sites. The ligation products were transformed into
DHIOB electrocompetent cells (BRL Life Technologies). "

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 183, 1 Sequence 183, 1
